

# Design

- |  |   |
|--|---|
| Have a search bar for users to look up any cafe/restaurant | Allow access for users to leave reviews and personal experiences                |
| Include pictures of establishment as well as dishes        | As a dropdown include: nutritional value, every ingredient, and allergens       |
| Have a search bar for users to look up any cafe/restaurant |   |
| Include filters for select food concerns                   | Include up-to-date menus of each establishment, also include last updated date. |
| Always ask user for feedback on meal after dining          | Have a counter for how many times food orders/requests have messed up           |

# Solutions

- |  |   |
|--|---|
| Each dish from establishment must be marked with respective allergen and dietary restriction (even small details like cross contamination) | Should include any and all updates/changes to dishes  |
| All ingredients must be listed, and write nutritional values of dishes   | Should include any and all updates/changes to dishes  |
| Maybe have speed dial button for emergency services?   | User can make profile with all concerns and app should automatically show results               |
|  | Maybe also include a recipe tab where app shows users how to make meals that fit their concerns |

# MISC

- |   |   |
|---|---|
| User privacy concerns, because user location would be required                | How to make more people aware of app?   |
| Hiring food critics for the app?  | Would people actually use it over just googling it? How to make it more convenient than google. |
| Should a special order tab be made? So user can express restrictions to chefs | More privacy concerns for user because making profiles would be recommended                     |

# Potential Issues

- |  |   |
|--|---|
| Including nutritional value (with calories) may promote/trigger eating disorders           | Difficult to include ALL establishments, especially to differentiate by location      |
| How to promote all people to use app in order to strength usefulness?                      | How to get restaurants to comply with all the criteria?                               |
| Restaurants with secret/passed down recipes?   | If changes are made frequently how to make sure app stays up to date?                 |
| How to make app include ALL establishments (even small/start ups)? Food Trucks? Fair food? | Restaurants can make same food differently depending on location, how to accommodate? |
